SUMMARY

Senior Full Stack Engineer with 9+ years building and scaling fintech, SaaS, and cloud-native platforms across TypeScript, React, Node.js, Python, and AWS. Architected peer-to-peer lending infrastructure serving 1M+ users; owned end-to-end delivery across UI, APIs, data, and cloud with microservices migration and agentic CI/CD automation.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Python, PHP, Dart
- **Frontend:** React.js, Next.js, Angular, Angular Material, Vite, Webpack, HTML5, CSS3, Sass/SCSS, Tailwind, Styled Components, CSS Modules, jQuery, Electron, PWA, WebGL/Three.js/Babylon.js, Redux, RTK, Apollo / Apollo Client, Unidirectional data flows, Context API, OOP, Micro-frontends, Module Federation, Figma, Design systems, Multi-step form UX, Chart.js, Storybook, MUI, React Hook Form
- **Backend:** Node.js, Express, Flask, NestJS, Microservices, Multi-tenancy, REST, OpenAPI/Swagger, GraphQL, RabbitMQ, Redis, Sequelize, WebSockets, Postman, mobile backend support, push notifications, session handling, offline sync, API versioning, Firebase Auth, RBAC, API gateway
- **Databases:** MySQL, MongoDB, SQLite, DynamoDB, PostgreSQL, Firestore, Supabase
- **Cloud & DevOps:** AWS (ECS, Lambda, CloudWatch, RDS, S3, EC2, DynamoDB, Secrets Manager, CloudFront, Route53), Azure, VPC, Docker, Kubernetes, nginx, PM2, SSL/Certbot, CDN, Terraform, Azure DevOps, GitHub Actions, GitLab CI, CI/CD, UNIX shell, Vercel, Netlify, Auth0, Azure AD, npm/yarn/pnpm, NPM packages, Prettier, Husky
- **Testing:** Jest, RTL, Cypress, Playwright, Mocha, Stryker, Vitest
- **AI & Automation:** Claude Code, Cursor, Copilot, ChatGPT, MCP, AI PR review, Agentic CI/CD, Prompt eng, RAG, LangChain, Gemini, TensorFlow, DeepFace
- **Methodologies:** Agile, SOLID, DRY, modernization, WCAG 2.1 AA, SDLC, on-call, system design, Mentoring, JIRA
- **Data & Observability:** Airflow, Superset, New Relic, Datadog, Sentry, Mixpanel, LaunchDarkly
- **Domain:** KYC, Payments, Stripe, Rewards

EXPERIENCE

Incubyte

Senior Full Stack Engineer

Sep 2024 – May 2026

- Led full-stack development of enterprise applications using React.js, Node.js, and Python, delivering 14+ scalable features across front-end and backend systems for 3 tier-1 client engagements.
- Spearheaded WCAG 2.1 AA accessibility initiatives across key client projects, authoring 40+ engineering standards and reducing compliance risk by 100% for broader user segments.
- Shifted accessibility checks left by independently integrating ESLint accessibility rules and AI-based PR review workflows, cutting production A11y bugs by 45% earlier in the development life-cycle.
- Owned on-call responsibilities for production systems and drove adoption of incident practices, reducing Mean Time to Resolution (MTTR) by 35%.
- Managed 3 concurrent engineering work-streams, delivering MVP and roadmap features across quarterly planning cycles while balancing short-term needs with long-term platform goals.
- Integrated Claude Code and GitHub Copilot into the engineering workflow, reducing boilerplate development time by 30% and accelerating complex refactoring efforts.
- Architected agentic AI workflows within the CI/CD pipeline to automate pull request creation and targeted code quality reviews, saving 6+ hours of manual review overhead per engineer weekly.
- Resolved a WCAG captions compliance blocker on a healthcare video platform serving millions of statically-hosted videos, diagnosing that SRT subtitles were incompatible with the HTML5 <track> element and driving a platform-wide migration to VTT that unblocked a Microsoft client onboarding.

Byaj Book

- Architected a peer-to-peer lending platform serving 1M+ users and led the migration from a monolithic MVP to a microservices architecture using Node.js, Redis, and AWS ECS, achieving 99.9% uptime and reducing infrastructure costs by 35%.
- Introduced Agile delivery practices and bi-weekly release cycles across a cross-functional team of 8 engineers, QAs, and designers, reducing feature time-to-market by 40%.
- Implemented CI/CD pipelines in Azure DevOps to automate build, test, and deployment workflows, reducing deployment time by 50% and improving release reliability.
- Designed ETL pipelines using Apache Airflow to unify product and application data from operational databases and Mixpanel, deploying Apache Superset dashboards that uncovered \$50k+ in optimized transactional leakage.
- Improved platform security and reliability by implementing rate limiting, IP blocking, and request signing to mitigate DDoS risks, while integrating New Relic to reduce critical production anomalies by 65%.

Cyber Infrastructure

- Led development of 12+ end-to-end product modules using Node.js and Angular, owning backend and front-end implementation for scalable client-facing solutions.
- Diagnosed performance bottlenecks in high-load Node.js services and optimized database indexing strategies, improving system efficiency by 40% under production workloads.
- Led a team of 6 engineers to build a localized real estate platform using crypto-based smart contracts for fractional property ownership, driving end-to-end delivery of a \$1.2M blockchain-enabled product.
- Managed end-to-end SDLC for 5 international client engagements, improving delivery success rates by 30% through stronger planning, execution, and cross-functional coordination.

Dream Cyber Infoway

- Spearheaded the migration of 20GB+ of data from WordPress to a custom Node.js platform, engineering migration pipelines that delivered 0% data loss and reduced query latency by 60%.
- Independently designed and developed a marketing CRM with RBAC, drip campaigns, and funnel tracking capabilities, while optimizing infrastructure usage to reduce hosting costs by 30%.

Argalon Technologies

- Built web application features using Node.js, jQuery, Angular, and early React.js, contributing across front-end and backend development.
- Developed and delivered project modules aligned with business requirements, supporting on-time feature implementation across active client workstreams.
- Maintained and enhanced web applications by resolving defects and supporting iterative feature improvements.

Hyffins

- Developed a food delivery platform using Node.js, Express, and MySQL, building scalable backend functionality to support responsive user experiences and operational workflows.
- Designed and implemented internal tools for delivery management and food manufacturing operations, improving workflow efficiency across internal teams.

PROJECTS

SMP Photo Album Suite | *Python, Flask, TensorFlow, DeepFace, RabbitMQ, Node.js, Angular, Docker*

- Built an async face-detection worker using Python, Flask, TensorFlow, and DeepFace to process album uploads via RabbitMQ, persisting embeddings and metadata to MySQL and S3.
- Architected the Node.js/Express backend with Sequelize, JWT auth, AWS S3 presigned uploads, and RabbitMQ integration, deployed behind nginx with PM2 cluster mode.
- Delivered an Angular 16 front-end with webcam capture and drag-and-drop upload flows, containerized with nginx for production static serving.

LinkedIn MCP Server | *TypeScript, MCP SDK, Zod, OAuth 2.0, Vitest, MSW*

- Published a TypeScript MCP server integrating LinkedIn OAuth and profile APIs for AI-assisted developer workflows, with Vitest and MSW test coverage.

MarketDojo | *Node.js, Ruby on Rails, React*

- Managed customer feature requests, issue resolution, and system scaling to support heavy workloads on the front-end using React, resulting in a 50% improvement in response time and enhanced user experience.
- Enhanced overall user experience and reduced response time by 50% through optimized front-end performance and user interface improvements.

Credit Repair CRM | *Node.js, Workflow Automation, Async Triggers*

- Implemented automated triggers with custom workflows to initiate defined sequences based on bureau report data, reducing manual intervention and enhancing process efficiency by 40%.
- Eliminated manual work for creating workflows, automating the process for infinite user cases, and reducing system load by 50% through asynchronous triggers, leading to a more scalable and efficient system.
- Boosted sales team productivity by enabling simultaneous client management with minimal manual intervention, increasing client handling capacity by 60% and significantly enhancing sales outcomes.

EDUCATION

RGPV Bhopal

Bachelor of Engineering (B.E.) — Electronics & Communication

2014
