SUMMARY

Senior Software Engineer with 9+ years architecting and scaling fintech, SaaS, and cloud-native platforms across Node.js, React, TypeScript, Python, and AWS. Owns systems end to end — from microservices serving 1M+ users at 99.9% uptime to agentic AI CI/CD workflows, accessibility engineering, and production on-call, consistently delivering measurable gains in reliability, developer productivity, and feature throughput.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript (ES2020+), Python, PHP, Dart, npm, yarn, pnpm, object-oriented programming (OOP)
- **Frontend:** React.js, Next.js, Angular, Angular Material, Vite, Redux, React Context API, Electron, Progressive Web Apps (PWA), WebGL / Three.js / Babylon.js, Chart.js, Tailwind CSS, CSS Modules, PrimeReact, Micro-frontends / micro-frontend architecture, Design systems / reusable component libraries and design-system ownership, HTML5, CSS3, jQuery, Redux Toolkit (RTK), Webpack, Styled Components, Sass / SCSS
- **Backend:** Node.js, Express.js, NestJS, Flask, Microservices, Multi-tenancy, REST APIs, OpenAPI/Swagger, GraphQL, RabbitMQ, Redis (caching, session management), Sequelize ORM, WebSockets, Postman, Backend support for mobile apps, Push notifications, session handling, offline sync, API versioning for mobile clients
- **Databases:** PostgreSQL, MySQL, MongoDB, SQLite, DynamoDB, Firebase / Firestore, Supabase
- **Cloud & DevOps:** AWS (ECS, Lambda, RDS, S3, EC2, DynamoDB, CloudWatch, CloudFront, Route 53), Microsoft Azure, VPC / Networking, IAM Least-Privilege, Auth0, Azure AD, Vercel, Netlify, Docker, Kubernetes, nginx, PM2, SSL/Certbot, CDN, Terraform, Azure DevOps, GitHub Actions, GitLab CI, CI/CD pipelines, Prettier, Husky, UNIX/Linux Shell
- **Data & Observability:** Apache Airflow, Apache Superset, New Relic, AWS CloudWatch, Datadog, Sentry, Mixpanel, LaunchDarkly, Feature flagging
- **Testing:** Jest, React Testing Library, Vitest, Cypress, Playwright, Mocha, Stryker (mutation testing)
- **AI & Automation:** Claude Code, Cursor, GitHub Copilot, ChatGPT, MCP (Model Context Protocol), Agentic CI/CD Workflows, AI-based PR Review, RAG pipelines, LangChain, Embeddings & Vector DBs, Prompt/version management, Secure AI usage guidelines, Google Gemini API
- **Methodologies:** Agile / Scrum, JIRA, SOLID, DRY, Application modernization / re-platforming, System Design & Architecture, SDLC Ownership, On-call / Incident Response, WCAG 2.1 AA Accessibility, Mentoring
- **Domain / Product Workflows:** KYC / Identity Verification, Payments / Payment Integrations, Stripe (subscriptions, invoicing, webhooks), Rewards / Loyalty Workflows

EXPERIENCE

Incubyte

Senior Software Engineer

Sep 2024 – May 2026

- Led full-stack development of enterprise applications using React.js, Node.js, and Python, delivering 14+ scalable features across front-end and backend systems for 3 tier-1 client engagements.
- Architected agentic AI workflows within the CI/CD pipeline to automate pull request creation and targeted code quality reviews, saving 6+ hours of manual review overhead per engineer weekly.
- Spearheaded WCAG 2.1 AA accessibility initiatives across key client projects, authoring 40+ engineering standards and reducing compliance risk by 100% for broader user segments.
- Shifted accessibility checks left by integrating ESLint accessibility rules and AI-based PR review workflows, cutting production A11y bugs by 45% earlier in the development life-cycle.
- Owned on-call responsibilities for production systems and drove adoption of effective incident-handling practices, reducing Mean Time to Resolution (MTTR) by 35%.
- Managed 3 concurrent engineering work-streams, delivering MVP and roadmap features across quarterly planning cycles while balancing short-term needs with long-term platform goals.
- Integrated Claude Code and GitHub Copilot into the engineering workflow, reducing boilerplate development time by 30% and accelerating complex refactoring efforts.

Byaj Book

Senior Software Engineer

Oct 2021 – Aug 2024

- Architected a peer-to-peer lending platform serving 1M+ users and led the migration from a monolithic MVP to a microservices architecture using Node.js, Redis, and AWS ECS, achieving 99.9% uptime and reducing infrastructure costs by 35%.
- Implemented CI/CD pipelines in Azure DevOps to automate build, test, and deployment workflows, reducing deployment time by 50% and improving release reliability.
- Designed ETL pipelines using Apache Airflow to unify product and application data from operational databases and Mixpanel, deploying Apache Superset dashboards that uncovered \$50k+ in optimized transactional leakage.
- Improved platform security and reliability by implementing rate limiting, IP blocking, and request signing to mitigate DDoS risks, integrating New Relic to reduce critical production anomalies by 65%.
- Introduced Agile delivery practices and bi-weekly release cycles across a cross-functional team of 8 engineers, QAs, and designers, reducing feature time-to-market by 40%.

Cyber Infrastructure

Senior Software Engineer

Mar 2019 – Sep 2021

- Led a team of 6 engineers to build a localized real estate platform using crypto-based smart contracts for fractional property ownership, driving end-to-end delivery of a \$1.2M blockchain-enabled product.
- Diagnosed performance bottlenecks in high-load Node.js services and optimized database indexing strategies, improving system efficiency by 40% under production workloads.
- Led development of 12+ end-to-end product modules using Node.js and Angular, owning backend and front-end implementation for scalable client-facing solutions.
- Managed end-to-end SDLC for 5 international client engagements, improving delivery success rates by 30% through stronger planning, execution, and cross-functional coordination.

Dream Cyber Infoway

Senior Software Engineer

May 2017 – Feb 2019

- Spearheaded the migration of 20GB+ of data from WordPress to a custom Node.js platform, engineering migration pipelines that delivered 0% data loss and reduced query latency by 60%.
- Independently designed and developed a marketing CRM with RBAC, drip campaigns, and funnel tracking, while optimizing infrastructure usage to reduce hosting costs by 30%.

Argalon Technologies

Software Engineer

Sep 2016 – Apr 2017

- Built web application features using Node.js, jQuery, Angular, and early React.js, contributing across front-end and backend development.
- Developed and delivered project modules aligned with business requirements, supporting on-time feature implementation across active client workstreams.
- Maintained and enhanced web applications by resolving defects and supporting iterative feature improvements.

Hyffins

Software Engineer

Nov 2015 – Aug 2016

- Developed a food delivery platform using Node.js, Express, and MySQL, building scalable backend functionality to support responsive user experiences and operational workflows.
- Designed and implemented internal tools for delivery management and food manufacturing operations, improving workflow efficiency across internal teams.

PROJECTS

LinkedIn MCP Server | *TypeScript, MCP SDK, Zod, OAuth 2.0, Vitest, MSW*

- Published a TypeScript MCP server (npm package) integrating LinkedIn OAuth and profile APIs as tools for AI-assisted developer workflows, with Vitest and MSW test coverage.

SMP Photo Album Suite | *Python, Flask, TensorFlow, DeepFace, RabbitMQ, Node.js, Angular, Docker*

- Built an async face-detection worker using Python, Flask, TensorFlow, and DeepFace to process album uploads via RabbitMQ, persisting embeddings and metadata to MySQL and S3.

- Architected the Node.js/Express backend with Sequelize, JWT auth, AWS S3 presigned uploads, and RabbitMQ integration, deployed behind nginx with PM2 cluster mode.
- Delivered an Angular 16 front-end with webcam capture and drag-and-drop upload flows, containerized with nginx for production static serving.

Credit Repair CRM | *Node.js, Workflow Automation, Async Triggers*

- Implemented automated triggers with custom workflows to initiate defined sequences based on bureau report data, reducing manual intervention and enhancing process efficiency by 40%.
- Automated workflow creation for infinite user cases, reducing system load by 50% through asynchronous triggers for a more scalable and efficient system.
- Boosted sales team productivity by enabling simultaneous client management, increasing client handling capacity by 60%.

EDUCATION

RGPV Bhopal

Bachelor of Engineering (B.E.) — Electronics & Communication

2014
