SUMMARY

Full Stack Engineer with 9+ years building fintech and SaaS platforms with React.js, Node.js, TypeScript, and AWS. Delivered 14+ enterprise features across tier-1 client engagements and implemented microservices serving 1M+ users at 99.9% uptime. Built WCAG 2.1 AA accessibility checks, CI/CD automation, and AI-assisted developer workflows that cut production A11y bugs by 45% and boilerplate development time by 30%.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Python, PHP, Dart
- **Frontend:** React.js, Next.js, Angular, Angular Material, Vite, Webpack, HTML5, CSS3, Sass/SCSS, Tailwind CSS, Styled Components, CSS Modules, jQuery, Electron, PWA, WebGL/Three.js/Babylon.js, Redux, Redux Toolkit, React Context API, OOP, Micro-frontends, Module Federation, Figma, Design systems, Multi-step form UX, Chart.js, Storybook, Material UI/MUI, React Hook Form
- **Backend:** Node.js, Express.js, Flask, NestJS, Microservices, Multi-tenancy, REST APIs, OpenAPI/Swagger, GraphQL, RabbitMQ, Redis, Sequelize, WebSockets, Postman, Backend support for mobile apps, Push notifications, session handling, offline sync, API versioning for mobile, Firebase Auth, RBAC, API gateway design
- **Databases:** MySQL, MongoDB, SQLite, DynamoDB, PostgreSQL, Firebase/Firestore, Supabase
- **Cloud & DevOps:** AWS (ECS, Lambda, CloudWatch, RDS, S3, EC2, DynamoDB, Secrets Manager, CloudFront, Route 53), Microsoft Azure, VPC/networking, Docker, Kubernetes basics, nginx, PM2, SSL/Certbot, CDN, Terraform, Azure DevOps, GitHub Actions, GitLab CI, CI/CD, UNIX/Linux shell, Vercel, Netlify, Auth0, Azure AD/SSO, NPM packages, Prettier, Husky, Git/GitHub
- **Data & Observability:** Airflow, Superset, New Relic, CloudWatch, Datadog, Sentry, Mixpanel, Feature flagging/LaunchDarkly
- **Testing:** Jest, React Testing Library, Cypress, Playwright, Mocha, Stryker, Vitest
- **AI & Automation:** Claude Code, Cursor, GitHub Copilot, ChatGPT, MCP, AI-based PR review, Agentic CI/CD, Prompt engineering, Prompt/version management, Secure AI usage guidelines, Embeddings/vector DBs, RAG, LangChain, Ollama, Google Gemini API
- **Methodologies:** Agile/Scrum, SOLID, DRY, Application modernization, WCAG 2.1 AA, SDLC ownership, On-call/incident response, System design, Clean code, JIRA
- **Domain / Product Workflows:** KYC, Payments, Stripe, Rewards/loyalty

EXPERIENCE

Incubyte

Remote

Software Engineer

Sep 2024 – May 2026

- Built full-stack enterprise applications using React.js, Node.js, and Python, delivering 14+ scalable features across front-end and backend systems for 3 tier-1 client engagements.
- Implemented WCAG 2.1 AA accessibility standards across key client projects, applying 40+ engineering standards and reducing compliance risk by 100% for broader user segments.
- Integrated ESLint accessibility rules and AI-based PR review workflows to shift accessibility checks left, cutting production A11y bugs by 45% earlier in the development life-cycle.
- Owned on-call responsibilities for production systems, reducing Mean Time to Resolution (MTTR) by 35% through effective incident handling practices.
- Delivered MVP and roadmap features across 3 concurrent engineering work-streams, balancing short-term delivery with long-term platform goals across quarterly planning cycles.
- Integrated Claude Code and GitHub Copilot into the development workflow, reducing boilerplate development time by 30% and accelerating complex refactoring efforts.
- Built agentic AI workflows within the CI/CD pipeline to automate pull request creation and targeted code quality reviews, saving 6+ hours of manual review overhead per engineer weekly.

- Resolved a WCAG captions compliance blocker on a healthcare video platform serving millions of statically-hosted videos, diagnosing that SRT subtitles were incompatible with the HTML5 <track> element and implementing a platform-wide migration to VTT that unblocked a Microsoft client onboarding.

Byaj Book

Remote

Software Engineer

Oct 2021 – Aug 2024

- Implemented a peer-to-peer lending platform serving 1M+ users and built the migration from a monolithic MVP to a microservices architecture using Node.js, Redis, and AWS ECS, achieving 99.9% uptime and reducing infrastructure costs by 35%.
- Delivered features on bi-weekly release cycles using Agile delivery practices, reducing feature time-to-market by 40%.
- Implemented CI/CD pipelines in Azure DevOps to automate build, test, and deployment workflows, reducing deployment time by 50% and improving release reliability.
- Designed ETL pipelines using Apache Airflow to unify product and application data from operational databases and Mixpanel, deploying Apache Superset dashboards that uncovered \$50k+ in optimized transactional leakage.
- Improved platform security and reliability by implementing rate limiting, IP blocking, and request signing to mitigate DDoS risks, while integrating New Relic to reduce critical production anomalies by 65%.

Cyber Infrastructure

Indore, India

Software Engineer

Mar 2019 – Sep 2021

- Developed 12+ end-to-end product modules using Node.js and Angular, owning backend and front-end implementation for scalable client-facing solutions.
- Diagnosed performance bottlenecks in high-load Node.js services and optimized database indexing strategies, improving system efficiency by 40% under production workloads.
- Delivered end-to-end SDLC for 5 international client engagements, improving delivery success rates by 30% through stronger planning and execution.
- Built a localized real estate platform using crypto-based smart contracts for fractional property ownership, contributing to end-to-end delivery of a \$1.2M blockchain-enabled product.

Dream Cyber Infoway

Indore, India

Software Engineer

May 2017 – Feb 2019

- Migrated 20GB+ of data from WordPress to a custom Node.js platform, engineering migration pipelines that delivered 0% data loss and reduced query latency by 60%.
- Designed and developed a marketing CRM with RBAC, drip campaigns, and funnel tracking capabilities, optimizing infrastructure usage to reduce hosting costs by 30%.

Argalon Technologies

Indore, India

Software Engineer

Sep 2016 – Apr 2017

- Built web application features using Node.js, jQuery, Angular, and early React.js, contributing across front-end and backend development.
- Developed and delivered project modules aligned with business requirements, supporting on-time feature implementation across active client workstreams.
- Maintained and enhanced web applications by resolving defects and supporting iterative feature improvements.

Hyffins

Indore, India

Software Engineer

Nov 2015 – Aug 2016

- Developed a food delivery platform using Node.js, Express, and MySQL, building scalable backend functionality to support responsive user experiences and operational workflows.
- Designed and implemented internal tools for delivery management and food manufacturing operations, improving workflow efficiency across internal teams.

PROJECTS

Tiffin Tracker | *React, Firebase/Firestore, Vitest, Stryker*

- Built a Firebase-backed React app with Firestore security rules and emulator-driven development, enforcing quality via Stryker mutation testing and Vitest coverage.

SMP Photo Album Suite | *Python, Flask, TensorFlow, Node.js, Angular, RabbitMQ, AWS S3*

- Built an async face-detection worker using Python, Flask, TensorFlow, and DeepFace to process album uploads via RabbitMQ, persisting embeddings and metadata to MySQL and S3.
- Implemented the Node.js/Express backend with Sequelize, JWT auth, AWS S3 presigned uploads, and RabbitMQ integration, deployed behind nginx with PM2 cluster mode.
- Delivered an Angular 16 front-end with webcam capture and drag-and-drop upload flows, containerized with nginx for production static serving.

LinkedIn MCP Server | *TypeScript, MCP SDK, Zod, OAuth 2.0, Vitest*

- Published a TypeScript MCP server integrating LinkedIn OAuth and profile APIs for AI-assisted developer workflows, with Vitest and MSW test coverage.

Credit Repair CRM | *Node.js, Workflow Automation*

- Implemented automated triggers with custom workflows to initiate defined sequences based on bureau report data, reducing manual intervention and enhancing process efficiency by 40%.
- Eliminated manual work for creating workflows, automating the process for infinite user cases, and reducing system load by 50% through asynchronous triggers, leading to a more scalable and efficient system.
- Boosted sales team productivity by enabling simultaneous client management with minimal manual intervention, increasing client handling capacity by 60% and significantly enhancing sales outcomes.

EDUCATION

RGPV Bhopal

Bachelor of Engineering (B.E.) — Electronics & Communication

2014
