SUMMARY

Staff Engineer with 9+ years defining platform architecture and engineering standards across fintech, SaaS, and cloud-native systems. Drove monolith-to-microservices migrations serving 400k+ users at 99.9% uptime, established agentic AI CI/CD workflows and 40+ engineering standards adopted across tier-1 client engagements, and set the technical direction for reliability, developer productivity, and force-multiplier automation at org scale.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript (ES2020+), Python, PHP, Dart, npm, yarn, pnpm
- **Backend & Architecture:** Node.js, Express.js, Flask, Microservices Architecture, System Design, REST APIs, OpenAPI/Swagger, GraphQL, RabbitMQ, Redis, Sequelize ORM, WebSockets
- **Cloud & DevOps:** AWS (ECS, Lambda, RDS, S3, EC2, DynamoDB, CloudWatch), VPC / Networking, IAM Least-Privilege, Docker, Terraform, nginx, PM2, SSL/Certbot, CDN, Azure DevOps, GitHub Actions, CI/CD Pipelines, UNIX/Linux Shell
- **Data & Observability:** Apache Airflow, Apache Superset, New Relic, AWS CloudWatch, Datadog, Mixpanel, ETL Pipelines
- **Databases:** PostgreSQL, MySQL, MongoDB, SQLite, DynamoDB, Firebase / Firestore
- **AI & Automation:** Claude Code, Cursor, GitHub Copilot, ChatGPT, MCP (Model Context Protocol), Agentic CI/CD Workflows, AI-based PR Review, RAG Pipelines, LangChain, Embeddings & Vector DBs, Prompt Engineering
- **Methodologies:** System Design & Architecture, SDLC Ownership, On-call / Incident Response, WCAG 2.1 AA Accessibility Standards, Agile / Scrum, JIRA, Technical Mentoring
- **Frontend:** React.js, Next.js, Angular, Redux, Electron, Tailwind CSS, CSS Modules, PrimeReact, HTML5, CSS3
- **Testing:** Jest, Cypress, Playwright, Mocha, Stryker (mutation testing)

EXPERIENCE

Incubyte

Staff / Senior Software Engineer

Sep 2024 – Present

- Defined 40+ WCAG 2.1 AA engineering standards adopted across 3 tier-1 client engagements, reducing compliance risk for broader user segments and cutting production A11y bugs by 45%.
- Established agentic AI workflows within CI/CD pipelines to automate pull request creation and targeted code quality reviews, adopted across engineering teams and saving 6+ hours of manual review overhead per engineer weekly.
- Led full-stack development of enterprise applications using React.js, Node.js, and Python, delivering 14+ scalable features across front-end and backend systems for tier-1 clients.
- Shifted accessibility checks left by integrating ESLint accessibility rules and AI-based PR review workflows into the standard development life-cycle, catching defects earlier across teams.
- Owned on-call responsibilities for production systems and drove org-wide adoption of incident-handling practices, reducing Mean Time to Resolution (MTTR) by 35%.
- Managed 3 concurrent engineering work-streams across quarterly planning cycles, balancing short-term delivery with long-term platform strategy.
- Integrated Claude Code and GitHub Copilot into the engineering workflow as force-multiplier tooling, reducing boilerplate development time by 30% and accelerating complex refactoring.

Byaj Book

Co-Founder / Head of Engineering

Oct 2021 – Aug 2024

- Drove monolith-to-microservices platform strategy on AWS ECS for a peer-to-peer lending platform serving 400k+ users, achieving 99.9% uptime and reducing infrastructure costs by 35%.
- Established CI/CD pipelines in Azure DevOps to automate build, test, and deployment workflows, reducing deployment time by 50% and standardizing release reliability across the team.

- Architected ETL pipelines using Apache Airflow to unify product and application data from operational databases and Mixpanel, deploying Apache Superset dashboards that uncovered \$50k+ in optimized transactional leakage.
- Hardened platform security and reliability with rate limiting, IP blocking, and request signing to mitigate DDoS risks, integrating New Relic observability to reduce critical production anomalies by 65%.
- Built and led a cross-functional team of 8 engineers, QAs, and designers, introducing Agile delivery practices and bi-weekly release cycles that reduced feature time-to-market by 40%.

Cyber Infrastructure

Senior Software Engineer

Mar 2019 – Sep 2021

- Architected a \$1.2M blockchain-enabled real estate platform with crypto-based smart contracts for fractional property ownership, leading a team of 6 engineers through end-to-end delivery.
- Diagnosed performance bottlenecks in high-load Node.js services and redesigned database indexing strategies, improving system efficiency by 40% under production workloads.
- Established end-to-end SDLC processes across 5 international client engagements, improving delivery success rates by 30% through stronger planning, execution, and cross-functional coordination.
- Led development of 12+ end-to-end product modules using Node.js and Angular, owning backend and front-end architecture for scalable client-facing solutions.

Dream Cyber Infoway

Senior Software Engineer

May 2017 – Feb 2019

- Spearheaded the migration of 20GB+ of data from WordPress to a custom Node.js platform, engineering migration pipelines that delivered 0% data loss and reduced query latency by 60%.
- Designed and delivered a marketing CRM with RBAC, drip campaigns, and funnel tracking, while optimizing infrastructure usage to reduce hosting costs by 30%.

Argalon Technologies

Software Engineer

Sep 2016 – Apr 2017

- Built web application features using Node.js, jQuery, Angular, and early React.js, contributing across front-end and backend development.
- Delivered project modules aligned with business requirements, supporting on-time feature implementation across active client workstreams.

Hyffins

Software Engineer

Nov 2015 – Aug 2016

- Developed a food delivery platform using Node.js, Express, and MySQL, building scalable backend functionality to support responsive user experiences and operational workflows.
- Designed and implemented internal tools for delivery management and food manufacturing operations, improving workflow efficiency across internal teams.

PROJECTS

LinkedIn MCP Server | *TypeScript, MCP SDK, Zod, OAuth 2.0, Vitest, MSW*

- Published a TypeScript MCP server (npm package) exposing LinkedIn OAuth and profile APIs as tools for AI-assisted developer workflows, with Vitest and MSW test coverage.
- Designed a reusable MCP tooling pattern for integrating third-party OAuth APIs into AI IDEs.

SMP Photo Album Suite | *Python, Flask, TensorFlow, DeepFace, RabbitMQ, Node.js, Angular, Docker*

- Architected an async face-detection platform using Python, Flask, TensorFlow, and DeepFace to process album uploads via RabbitMQ, persisting embeddings and metadata to MySQL and S3.
- Designed the Node.js/Express backend with Sequelize, JWT auth, AWS S3 presigned uploads, and RabbitMQ, deployed behind nginx with PM2 cluster mode.
- Delivered an Angular 16 front-end with webcam capture and drag-and-drop upload flows, containerized with nginx for production static serving.

CI Boilerplate | *PHP, CodeIgniter 3, Illuminate Database, Laravel Mix, Travis CI, PHPUnit*

- Authored a 4-star open-source CodeIgniter 3 boilerplate integrating Illuminate Database, Laravel Mix, and Travis CI to standardize PHP project bootstrapping.

Tiffin Tracker | *React, Firebase / Firestore, Vitest, Stryker, gh-pages*

- Built a Firebase-backed React app with Firestore security rules and emulator-driven development, enforcing quality via Stryker mutation testing and Vitest coverage.

EDUCATION

RGPV Bhopal

Bachelor of Engineering (B.E.) — Electronics & Communication

2014
